

LEGEND CLUB MANAGEMENT IMPROVED HOSTING SERVICES

*“Joining forces with Node4
has allowed us to act with
confidence when dealing with
large opportunities.”*

Sean Maguire, Managing Director

ABOUT & BACKGROUND

Founded in 2002, York based Legend Club Management Systems Ltd is an independent & predominantly employee owned UK technology company.

Legend provides specialist cloud based leisure management software & a wide range of technical services to health club & leisure centre operators in the private, public & education sectors. Technical services include the provision of customer systems provided over private cloud in an all-inclusive package.

Legend's solution includes control of membership, EPOS, access control automation, frontdesk services, Smartphone & tablet apps & a fully integrated BACS Bureau with outsourced administration services.

Legend were experiencing significant growth due to numerous new customer contracts. The company's rate of growth was becoming so rapid that the ability to expand data centre capacity & specification became essential, in order to implement the large investment in additional infrastructure & maintain its high standard of customer service & support. Legend needed to increase capacity & quality of its hosting services to facilitate continued growth.

CHALLENGE

After a strategic review, it became clear that a new data centre partner was required. Legend required a cost-effective solution that would provide a secure & resilient environment with capacity in order to deal with the demand in internet-based services from its customers.

The new partner also needed to be capable of dealing with Legend's future requirements based on its rapid growth & associated increase in capacity draw. The ideal partner would also have multiple data centre sites so that Legend could implement secondary data centre operations to deliver backup & disaster recovery services of these business critical systems.

SOLUTION

Legend chose Node4 as their data centre partner after being impressed by their purpose-built & modern Leeds data centre. The company had confidence in the facilities' resilient dual feeds, which would help to sustain a high availability solution.

Legend has now been using Node4's services for several years & since colocating with Node4, it has seen company growth at a rate of over 20% year-on-year for the past three years.

*“When we visited Node4's
Leeds data centre, our first
impression was of a specialist
hosting company which placed a
high priority on innovation. Being
a large new centre, there was
also space for growth - important
for our future expansion
needs...”*
